

The Five Physical Assumptions of Accelerometer Physics

The physical dynamic structure of a Living Cosmos that we observe in the universe today consists of a duality of 2^{257} eternally existing Circlon shaped entities we call Protons and Electrons. These identically shaped particles are created from five physical assumptions that describe their structural dynamics.

Protons and Electrons are each constructed from two sets of spinning coils that each contain equal and opposite quantities of eternally conserved Angular Momentum. By any standards, Protons and Electrons must be considered to be alive. The story of how this eternally existing God and Goddess coupled together and then reproduced 256 times to create the reality the present day reality of a Living Cosmos is narrated and illustrated below

The Cosmic Paradigm of Momentum Physics (Momentum > Force > Energy)

The Principle of Absolute Circlon Angular Momentum is a completely new Physical Paradigm for the empirical measurements, calculations, and interpretations of the Five Metaphysical Assumptions of Mass, Space, Time, Energy, and Charge. These assumption are combined together to establish and quantify the eternal existences of (Yin & Yang) Positive and Negative Angular Momentum components of Protons and Electrons used to illustrate the continuing evolution of a Living Cosmos.

Five Initial Assumptions for Calculating the Existence of Circlon Momentum

- 1, **Mass**-positive existence - position of rest (M)
- 2, **Space**-negative existence - potential for motion (MS)
- 3, **Time**-virtual existence - Linear, Angular, and Gravitational vectors of motion (MS/T)
- 4, **Energy**-relative duality of momentum - $E = (1/2mv^2) < > (1/2Mv^2)$
- 5, **Charge** - temporal existence (+yin/-yang) (+proton/-electron) equal and opposite

Conserved Linear Momentum $p = (Mv < = > mV)$

Absolute Angular Momentum $I\omega = (MVR)$

Photon Linear and Angular Momentum Duality. $I\omega = (mCr) + p = (mc+/-v)$

Photon Linear and Rotational energy duality. $(E_L = 1/2mc^2) + (E_R = 1/2mC^2)$

Photon Linear Momentum and Linear Energy are relative to the observer.

Photon Angular Momentum and Rotational Energy are the same for all observers.

These five assumptions compose and quantify the accelerometer measurements of the Positive angular momentum of Protons, the Negative angular momentum of Electrons and the Neutral dual angular momentum of Photons.

A Living Cosmos contains no physical Dimensions, Fields, Aether or a Spacetime Continuum in the imaginary infinite void of Zero Momentum Rest. The only spacial dimensions in a Living Cosmos are One Dimensional Linear Momentum, Two Dimensional Angular Momentum, and Three Dimensional Gravitational Momentum.

The New Absolute Angular Momentum Equations of Physics and Chemistry are:

(Momentum > Force > Energy) $(mv > mv^2 > 1/2mv^2)$

Angular Momentum $I\omega = mvr = (p = Mv) < = F = > (p = mV)$

These equations falsify and replace Newton's Force equation ($F = ma$), Einstein's Energy equation ($e = mc^2$), and Newton's equivalent acceleration equation for Gravitational Force ($F = mg^2$) becomes the reciprocal Force equation ($E/M = g^2$) of Decelerating Gravitational Momentum.

A New Interpretation of Quantum Mechanics

By replacing Einstein's imaginary concept of Relative Energy with measurements and calculations of Absolute Momentum, the Relative Energy and Spacetime Continuum interpretations of Quantum Mechanics can be combined and unified into the Absolute Circlon Momentum Continuum interpretation of Quantum Mechanics.

This new paradigm of Absolute Momentum Physics is Backwards, Upside-Down, and Inside-Out from Relative Energy Theory. The opposite experimental physics paradigms of Energy Physics and Momentum Physics use the same basic Laws of Physics and Chemistry to construct the equations and calculations used in the measurement and observation physical events. Their differences are not in their observations or calculated results but in the interpretations of an event's intrinsic physical dynamics.

These two paradigms are essentially viewed as mirror images of one another. For example, in these opposite paradigms, UP replaces DOWN, BACKWARDS comes before FORWARDS, ARROWS OF TIME are reversed, and the energies of NEGATIVE and POSITIVE Angular Momentum are separate quantities in the conserved Deceleration/Acceleration of Linear, Angular, and Gravitational Momentum.

Deceleration/Acceleration Momentum Physics (Momentum > Force > Energy)

The Deceleration of Momentum is always the Cause of Force and the Effect of Force is always the equal Acceleration of Momentum. Energies are dual calculations used quantify the relative spacial differences between equal transfers of Momentum. Measurements of Momentum are absolute and calculations of energy are relative. Energy is not something physical like Momentum that can be measured. It is only a relative parameter of Momentum like Mass, Space, or Time and can only be calculated from an accelerometer measurement of Force.

The Circlon Momentum Continuum interpretation of Quantum Mechanics is based completely on accelerometer measurements of Forces produced by conserved exchanges in Linear, Angular, and Gravitational Momentum. A Living Cosmos contains nothing but equal and opposite entities of conserved Momentum ($p = mv$). There are no other separate physical entities such as Pure Energy ($e = mc^2$) or Pure Mass ($m = e/c^2$) in a Living Cosmos. Our Physical Reality contains only two equal and opposite entities: The Positive Angular Momentum ($I\omega = +E/M = CC$) of Protons and the Negative Angular Momentum ($I\omega = -E/M = CC$) of Electrons. (Energy/Mass) is the symbol for a unit of Angular Momentum ($e/m = mcr$).
